

It may be better to add R999 to reduce switching noise for true bypass. There is no R999 in the created PCB.

Analog delay based on DM-3 using V3205, V3102 and V571 ( the second source ICs )  
 - Removed FET electronic switches  
 - Modifiable to the true-bypass stompbox  
 - Changed transistors to easily obtainable ones ( 2SC945, 2SC1815 )
